

NSSL LAUNCHES 'CRUISE IP LIGHT' TO SEA CLIENTS

London, February 2007: NSSL, the international satellite communications service provider, has officially launched CruiseIP Light. CruiseIP Light is the first global maritime communication service to provide simultaneous voice and high speed data through a single compact device. The system is also extremely lightweight and versatile making it ideal for smaller vessels.

CruiseIP Light uses the latest FleetBroadband technology from Inmarsat and provides broadband connectivity of up to 432kbps with guaranteed data channels up to 256kbps.

The system has many applications, including:

- Email and webmail
- Real-time and electronic chart & weather updates
- Remote intranet and extranet access
- Secure communications
- Large file transfer
- Crew communications
- SMS and instant messaging
- Video conferencing

Sally-Anne Ray, Sales Director, NSSL, commented: "With the launch of Inmarsat's FleetBroadband at the end of 2007, high speed broadband is now available across the world's oceans. What distinguishes CruiseIP Light is its size, making it an attractive proposition for smaller vessels requiring broadband connectivity at sea." She went on to say: "The small size and seamless global coverage of CruiseIP Light also makes it a compelling option for those vessels who already have fixed broadband systems in place but who require communications in areas outside of their existing coverage area."
