

# IP Solutions for Newsgathering

NSSL & TET, the partnership behind E-Go Solutions, and Livewire Digital provide communication services to many of the world's leading TV networks and news organisations world-wide. We understand the pressures of operating in difficult conditions, and constantly strive to deliver innovative solutions to make news reporting easier. IP-Reporter, our new IP based software package for store and forward video, is a cost-effective and fast solution for reporting from news hot-spots at short notice.

## IP-Reporter

Ideal for occasional users such as freelance cameramen or reporters called in to support the main news crew during a major incident, IP-Reporter provides the broadcaster with a previously unknown level of flexibility and independence.

IP-Reporter is a software package, compatible with Livewire's M-Link store-and-forward video system, which can be installed on any laptop running on a Windows 2000 or XP, for file transfer via any available IP connection, including Inmarsat-GAN, Regional BGAN or ISDN.

Using IP-Reporter, a reporter can file video footage, audio, photo and written files from almost anywhere in the world. Once the reporter has finished his video report, he can connect the camera to the Firewire interface of the laptop, and capture and encode the video in MPEG-4, or proprietary formats. This can reduce transmission time by up to a factor of 3, when compared to an MPEG-1 clip at similar

quality. The simple, intuitive user interface allows the selection of the most appropriate compression factors for their feed.

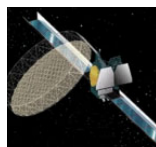

And by using the IP-Reporter's native acquisition feature, or a professional NLE, the reporter can tailor the footage for an optimum contribution, before transmitting it to the news room.

IP-Reporter can be purchased in packages of 5, 25 or 50 licenses, which are associated with a specified receiver; ensuring valuable news stories come only to you. The IP-Reporter receiver is designed to fit within the news centre, and is available in desktop and rack-mounted versions.

The IP-Reporter is particularly effective for use with the Regional BGAN system, providing an extremely portable package for rapid deployment.

Cameraman/Journalist
