

NSSL's African arrival will boost broadband choice and speed

Satellites allow individuals to keep in touch however remote their location

London, May – Satellite communication provider NSSL Ltd is now offering organisations that operate across Africa greater choice when it comes to keeping in touch. Those organisations that want faster and more robust broadband connectivity will be able to benefit from a substantially quicker 3mb connection at a far more accessible price. All of this is possible thanks to the new T11 satellite that was recently launched. Improved broadband access will help to solve some of the issues that have prevented organisations operating in Africa from fully enjoying the benefits of rapid and reliable communications.

NSSL, as a new provider in the region, is not only offering the market greater speed but also greater choice. NSSL act as a convenient one-stop-shop for all sat com needs. Organisations can now use NSSL for all their voice, data and broadband communication requirements. NSSL provide upfront consultancy on the most suitable equipment, and can then provide that equipment from a broad selection of different types and models. NSSL then manage the service contract and provide ongoing maintenance support. This is good news for any organisation looking to have more choice in the supply partner they pick for their satellite communications services and a hassle free experience.

South African Danielle Edwards, Product Manager at NSSL, said: "Increasingly people working in Africa need instant communications wherever they find themselves. But, previously the slow rate of connection and limited choice of bandwidth has made fast and reliable communication a scarce resource. With patchy cellular

coverage and unreliable land lines, being able to use satellites to keep in touch makes perfect sense. We are delighted to be now offering our wide range of communication service in this exciting and growing market.”

NSSL are one of the worlds leading satellite communications providers. They provide advice, equipment and service contracts to a wide variety of mining, oil, media, military, maritime and governmental organisations. NSSL specialise in providing both land and sea satellite communications.

In July 2009 (4th July–10th July) NSSL representatives will be meeting organisations in the Southern Africa area in order to explain the benefits of satellite based communications and demonstrate some of the equipment that can be used. To find out more and meet an NSSL representative please use the contact information below.
