

NSSL ANNOUNCES CREATION OF NEW RENTAL SERVICE

NSSL, London: International satellite communications provider NSSL today announced the launch of a rental service for customers who need satcoms solutions at short notice and for a limited period of time. NSSL's new service brings more choice to satcoms customers and promotes competition in the industry.

This flexibility is particularly useful and cost effective as it means users do not have to purchase equipment that is unused for long periods. In the current volatile global situation, users who have to react quickly to global events, like journalists and aid workers, are likely to find this especially useful.

Customers will now be able to rent terminals from the entire range of NSSL's products, including satellite phones from Iridium and Thuraya, as well as terminals from across the BGAN range. This allows for different levels of service, individually tailored to the specific requirements of the user.

Sally-Anne Ray, Sales Director at NSSL commented: "We're seeing increased demand for satellite communications equipment for short periods of time. Journalists, aid workers and military personnel often do not know when their next deployment is, so offering a rental service offers the kind of flexibility they require." She went on to say, "This builds on NSSL's commitment to be the most flexible, innovative and service led provider in the marketplace."
