

WORLD'S CHEAPEST SATELLITE PHONE RELEASED

October 2007, London: The world's cheapest satellite phone has been launched. Costing under £400, (\$775) the Inmarsat IsatPhone puts satellite phones within reach of the ordinary business user like never before. According to NSSL, the leading international satellite communications provider, the IsatPhone is comparable in price to more expensive conventional mobile phone models from the likes of Nokia. NSSL provides satellite phones to business, the media, military, boat owners and private users.

Danielle Edwards, Product Marketing Manager at NSSL commented: "Prices are dropping fast and the IsatPhone is a great entry level sat-phone for new satellite users because it is affordable and simple to use." She went on to say: "We expect to see a lot more SME's joining the ranks of the military and international aid organisations by deciding to purchase a satellite phone."

Launched in July 2007, the IsatPhone allows business users and travellers to communicate from areas with poor or non-existent networks. Coverage is currently in Asia, Africa and the Middle East (see map) but is going global in 2008.

The IsatPhone's features include:

- Lightweight, pocket size handset
- Text (GSM mode)
- Tough design
- Dual mode satellite / GSM mobile phone
- Easy to use
- Full range of accessories
